

# Code Review Checklist

## Review Information:

Name of Reviewer: WangQingyun, QiuJin

Name of Coder: Chendishi

File(s) under review: ActList.java, Admin.java, deleteact.jsp.

Brief description of change being reviewed:

1. A function called DelAct() was added on the ActList.java file, which can be used by the administrator to delete an activity.
2. A function called DelActivity was added on the Admin.java file, which use the DelAct() function.
3. All activities with delete button can be shown on the deleteact.jsp

## Review Notes (problems or decisions):

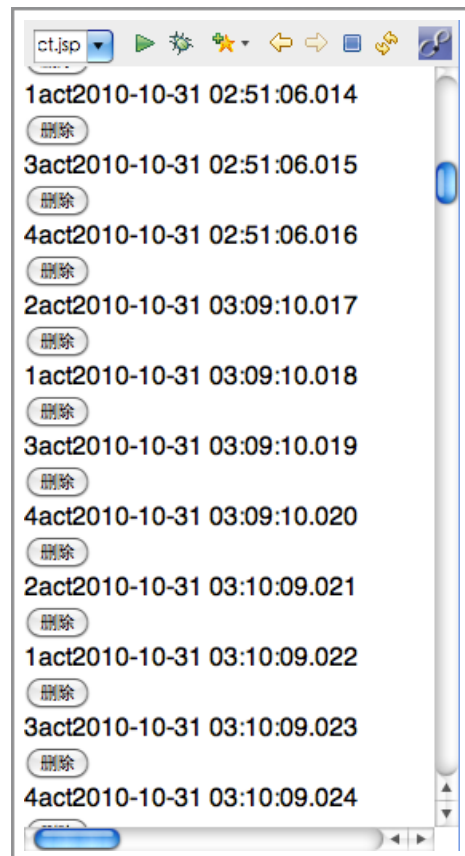

1. Problem: In the deleteact.jsp, the delete button is put below the title of activity and there are not any separator between activities. User do not know the button is related to which activity.

Decision: Make the activity and its delete button on a line or put separator between activities.

2. Problem: The deleteact.jsp lists all the activities in a page, which is difficult for the administrator to find the activities he wants to delete. This is not user-friendly.

Decision: Add the search function allowing administrator to find an activities and then delete it.

3. Problem: When user click the delete button, the system will delete the activity immediately. The system will not alert a window to let user confirm to delete.

Decision: Add an alert window to let user confirm to delete.

SVN Versions (if applicable):

Before review: COCI7-11-19

After revisions: COCI8-11-25
